Crisis or Turbulence

How can we help?

Situation assessment
We conduct a thorough assessment of the current situation, analysing the impact of the external event on the organisation's operations, financial health, and overall resilience.

Stakeholder engagement
We engage with key stakeholders, including executives, department heads, and employees, to understand their perspectives, concerns, and insights.
In times of crisis, collaboration is crucial for effective decision-making.

Risk analysis and mitigation
We perform a comprehensive risk analysis to identify potential threats and challenges associated with the external event. We develop strategies and mitigation plans to address these risks and enhance organisational resilience.

Operational continuity planning
We work with the organisation to develop and implement operational continuity plans. Identify critical business functions, establish alternative processes, and ensure essential operations can continue in the face of disruptions.

Regulatory compliance
We stay abreast of regulatory changes that may affect the organisation's operations. We ensure compliance with new regulations and adapt strategies accordingly to navigate legal and regulatory challenges.

Adaptation of business model
We assess the organisation's current business model and explore opportunities for adaptation, considering shifts in customer behaviour, emerging market trends, and new revenue streams that may arise in response to the external event.

Communication strategy
Develop a clear and transparent communication strategy to keep employees, customers, and other stakeholders informed about the organisation's response to the crisis. Effective communication builds trust and helps manage expectations.

Continuous monitoring and adjustment
We establish mechanisms for continuous monitoring of the situation and organisational performance. We are prepared to adjust strategies in real-time as the external event evolves and new information becomes available.

Crisis or Turbulence

How would we measure success?

To measure the success of our intervention in case of crisis or turbulence we can measure:

- Operational continuity: Evaluate the ability to maintain or quickly resume operations
- Employee resilience and engagement: Measure improvements in employee satisfaction, productivity, and engagement
- Customer and stakeholder satisfaction: Monitor satisfaction levels among customers and stakeholders
- Technology infrastructure enhancement: Assess upgrades in technology supporting remote work and business continuity
- Regulatory compliance: Ensure compliance with regulatory changes and evolving requirements
- Risk mitigation effectiveness: Evaluate the success of strategies in mitigating anticipated risks
- Leadership effectiveness: Measure leadership's ability to navigate crises and inspire confidence
- Business continuity planning success: Evaluate preparedness for future disruptions and the efficiency of crisis response
- Strategic goals achievement: Evaluate progress toward achieving strategic goals outlined in response to the crisis
